5.Vechile Order Object

The screenshot shows the Salesforce Setup interface for the 'Vehicle Order' object. The top navigation bar includes 'Developer Edition', a search bar, and various utility icons. The left sidebar shows the 'Setup' menu with 'Object Manager' selected. The main content area is titled 'Vehicle Order' and contains a 'Details' section. The 'Details' section is divided into two columns. The left column lists configuration options: Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, and List View Button Layout. The right column displays the current configuration for the 'Vehicle Order' object. The 'API Name' is 'Vehicle_Order__c', 'Custom' is checked, 'Singular Label' is 'Vehicle Order', and 'Plural Label' is 'Vehicle Orders'. The 'Enable Reports' checkbox is checked, 'Track Activities' is checked, 'Track Field History' is checked, 'Deployment Status' is 'Deployed', and the 'Help Settings' link points to 'Standard salesforce.com Help Window'. 'Edit' and 'Delete' buttons are located in the top right corner of the details section.

6. Vehicle Test Drive Object

The screenshot shows the Salesforce Setup interface for the 'Vehicle Test Drive' object. The top navigation bar includes 'Developer Edition', a search bar, and various utility icons. The left sidebar shows the 'Setup' menu with 'Object Manager' selected. The main content area is titled 'Vehicle Test Drive' and contains a 'Details' section. The 'Details' section is divided into two columns. The left column lists configuration options: Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, and List View Button Layout. The right column displays the current configuration for the 'Vehicle Test Drive' object. The 'API Name' is 'Vehicle_Test_Drive__c', 'Custom' is checked, 'Singular Label' is 'Vehicle Test Drive', and 'Plural Label' is 'Vehicle Test Drives'. The 'Enable Reports' checkbox is checked, 'Track Activities' is checked, 'Track Field History' is checked, 'Deployment Status' is 'Deployed', and the 'Help Settings' link points to 'Standard salesforce.com Help Window'. 'Edit' and 'Delete' buttons are located in the top right corner of the details section.

Tab

Didn't find what you're looking for? Try using Global Search.

SETUP

Tabs

Custom Tabs

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

Custom Object Tabs

13.Apex classes and triggers

Apex class : VehicleOrderTriggerHandler

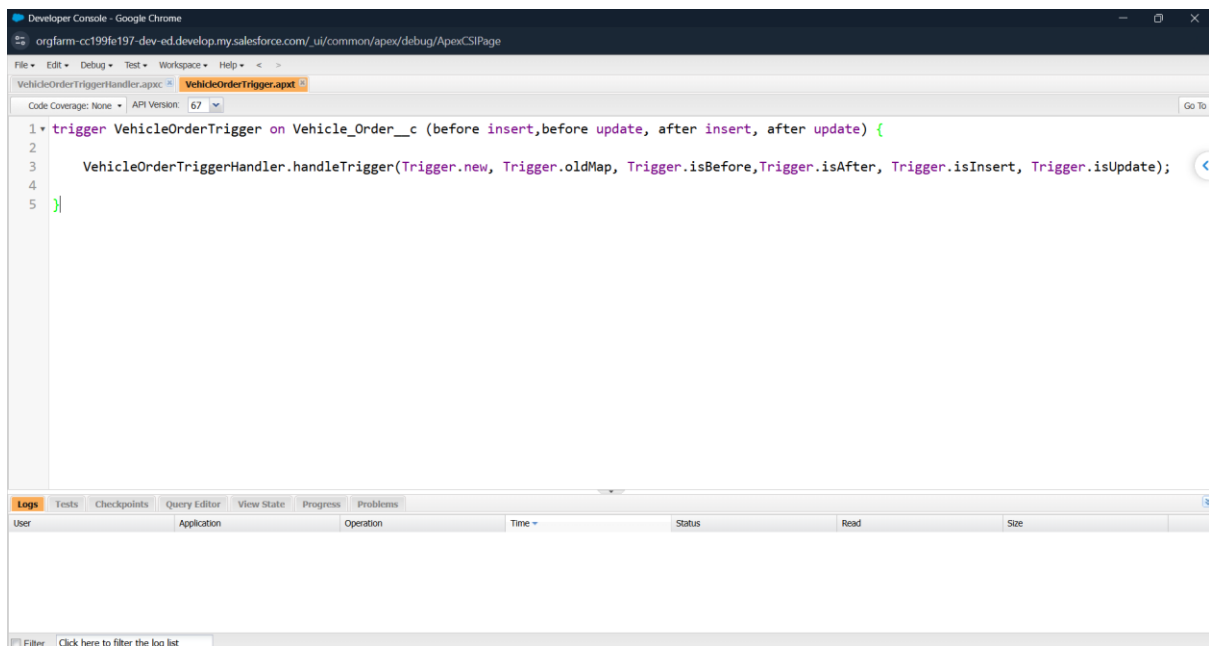

```
Developer Console - Google Chrome
orgfarm-cc199fe197-dev-ed.develop.my.salesforce.com/_ui/common/apex/debug/ApexCSIPage

VehicleOrderTriggerHandler.apex
Code Coverage: None | API Version: 67

1 public class VehicleOrderTriggerHandler {
2
3     public static void handleTrigger(List<Vehicle_Order__c> newOrders, Map<Id, Vehicle_Order__c> oldOrders, Boolean isBefore, Boolean isAfter, Boolean isOnDelete) {
4
5         if (isBefore) {
6
7             if (isInsert || isUpdate) {
8
9                 preventOrderIfOutOfStock(newOrders);
10
11             }
12
13         }
14
15
16
17         if (isAfter) {
18
19             if (isInsert || isUpdate) {
20
21                 // ... (code continues)
22             }
23
24         }
25     }
26 }
```

The screenshot shows the Apex class 'VehicleOrderTriggerHandler' in the Developer Console. The class contains a static method 'handleTrigger' that takes a list of new orders, a map of old orders, and three boolean flags: 'isBefore', 'isAfter', and 'isOnDelete'. The method logic includes conditional checks for 'isBefore' and 'isAfter' to determine when to call 'preventOrderIfOutOfStock' or other logic. The code is currently in the 'Logs' tab, showing a table with columns: User, Application, Operation, Time, Status, Read, and Size.

Apex trigger: VehicleOrderTrigger

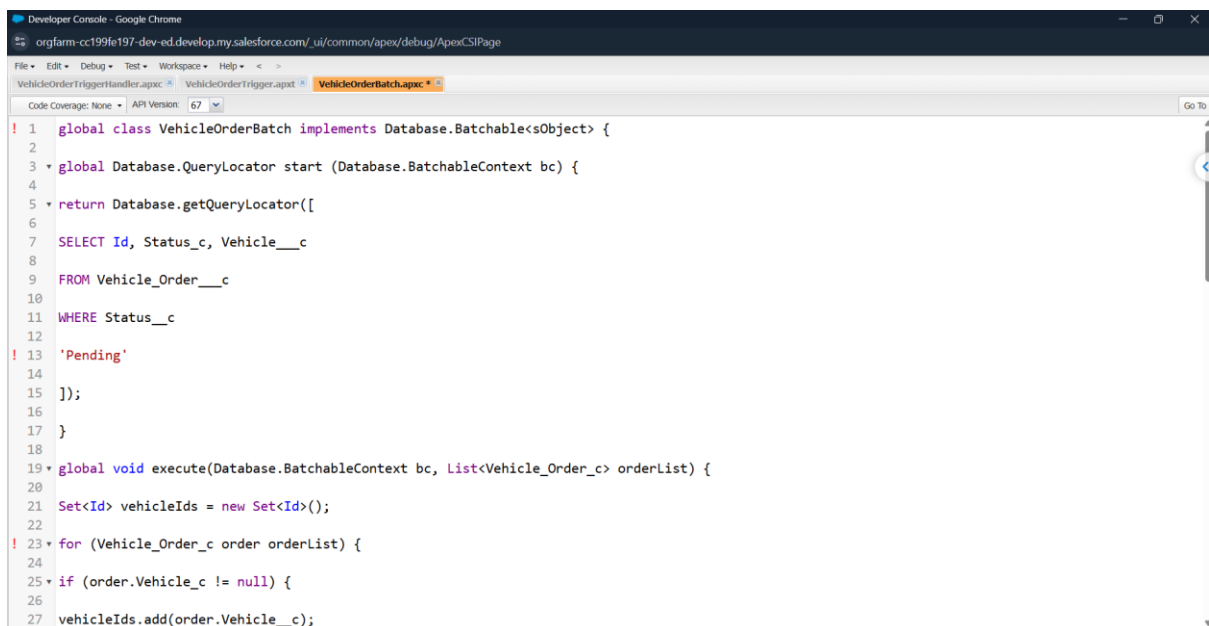

The screenshot shows the Salesforce Developer Console with the file `VehicleOrderTrigger.apxt` open. The code defines a trigger on the `Vehicle_Order__c` object, firing before insert, before update, after insert, and after update. The trigger calls the `VehicleOrderTriggerHandler.handleTrigger` method, passing `Trigger.new`, `Trigger.oldMap`, and flags for `Trigger.isBefore`, `Trigger.isAfter`, `Trigger.isInsert`, and `Trigger.isUpdate`.

```
1 trigger VehicleOrderTrigger on Vehicle_Order__c (before insert,before update, after insert, after update) {  
2  
3     VehicleOrderTriggerHandler.handleTrigger(Trigger.new, Trigger.oldMap, Trigger.isBefore,Trigger.isAfter, Trigger.isInsert, Trigger.isUpdate);  
4  
5 }
```

The bottom of the console shows a table with columns: User, Application, Operation, Time, Status, Read, and Size. The table is currently empty.

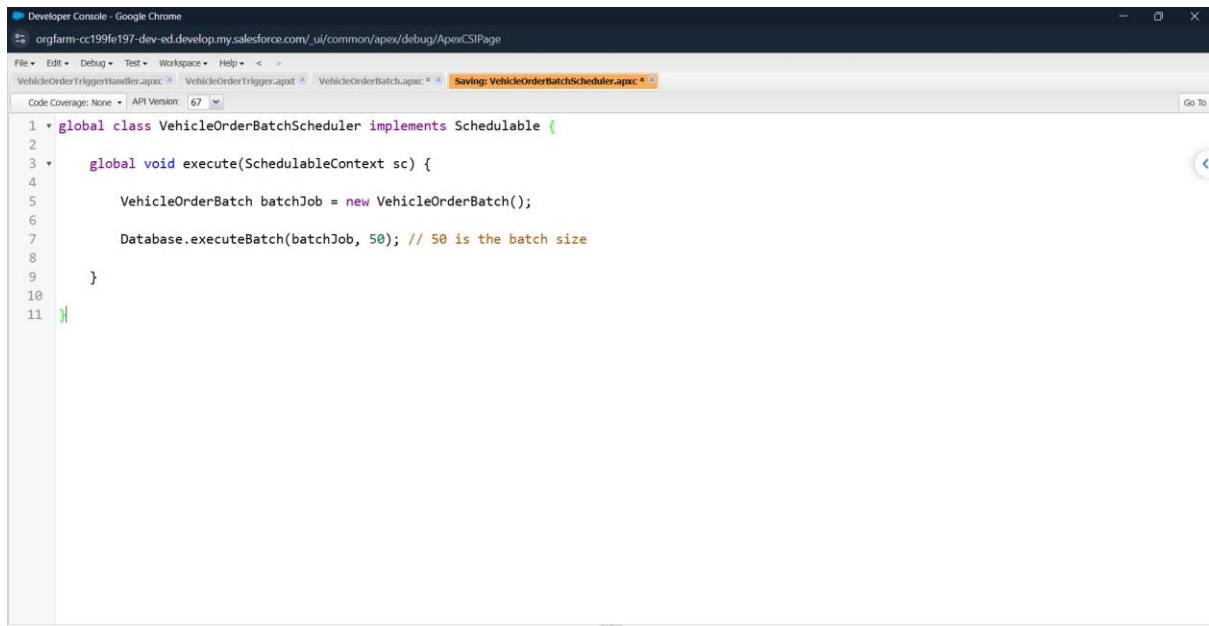

Batch apex class: VehicleOrderBatch

The screenshot shows the Salesforce Developer Console with the file `VehicleOrderBatch.apxc` open. The code defines a batch class `VehicleOrderBatch` that implements `Database.Batchable<Object>`. It includes a `start` method to get a query locator for records with status 'Pending' and an `execute` method to process the batch of records, adding their IDs to a set.

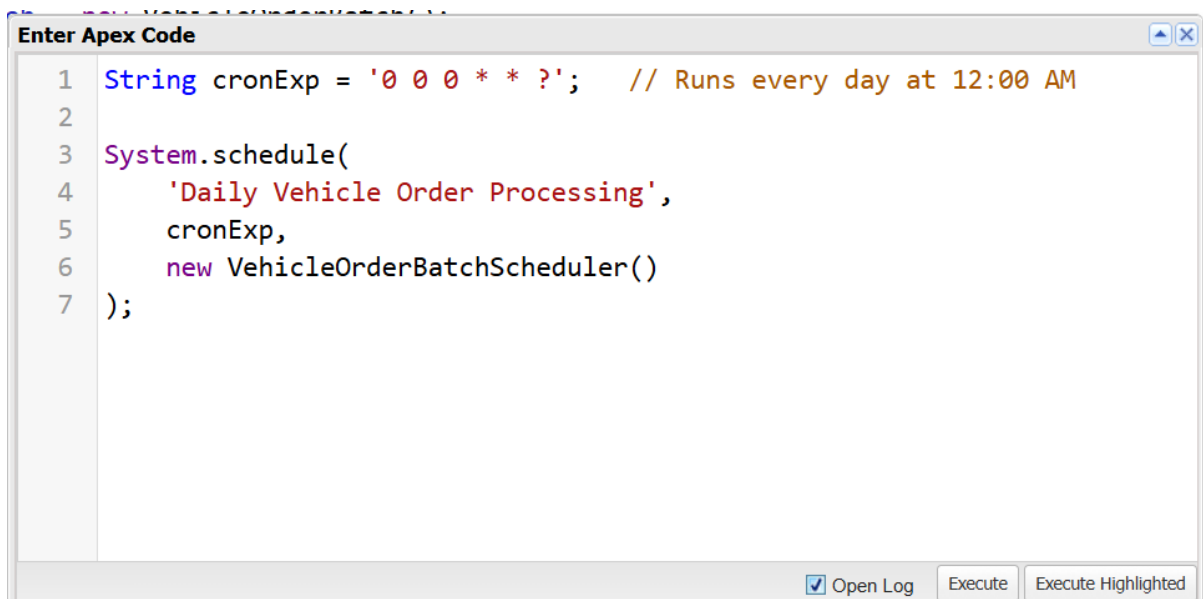

```
1 global class VehicleOrderBatch implements Database.Batchable<Object> {  
2  
3     global Database.QueryLocator start (Database.BatchableContext bc) {  
4  
5         return Database.getQueryLocator([  
6  
7             SELECT Id, Status__c, Vehicle__c  
8  
9             FROM Vehicle_Order__c  
10  
11             WHERE Status__c  
12  
13             'Pending'  
14  
15         ]);  
16     }  
17  
18     global void execute(Database.BatchableContext bc, List<Vehicle_Order__c> orderList) {  
19  
20         Set<Id> vehicleIds = new Set<Id>();  
21  
22         for (Vehicle_Order__c order : orderList) {  
23  
24             if (order.Vehicle__c != null) {  
25  
26                 vehicleIds.add(order.Vehicle__c);  
27  
28             }  
29         }  
30     }  
31 }
```

Scheduler Class: VehicleOrderBatchScheduler

The screenshot shows the Salesforce Developer Console with the 'VehicleOrderBatchScheduler.apxc' file open. The code defines a global class that implements the Schedulable interface. It contains a single method, execute, which creates a new VehicleOrderBatch object and executes it as a batch job with a size of 50.

```
1 global class VehicleOrderBatchScheduler implements Schedulable {  
2  
3     global void execute(SchedulableContext sc) {  
4  
5         VehicleOrderBatch batchJob = new VehicleOrderBatch();  
6  
7         Database.executeBatch(batchJob, 50); // 50 is the batch size  
8  
9     }  
10  
11 }
```

The screenshot shows the 'Enter Apex Code' dialog box in the Salesforce Developer Console. It contains the following Apex code to schedule the VehicleOrderBatchScheduler class to run daily at 12:00 AM.

```
1 String cronExp = '0 0 0 * * ?'; // Runs every day at 12:00 AM  
2  
3 System.schedule(  
4     'Daily Vehicle Order Processing',  
5     cronExp,  
6     new VehicleOrderBatchScheduler()  
7 );
```

At the bottom of the dialog, there are three buttons: 'Open Log' (checked), 'Execute', and 'Execute Highlighted'.

Output:

Developer Console - Google Chrome
